

Alfalfa 5-1-5 with Kelp

Product Features:	<ul style="list-style-type: none"> • Made with Alfalfa, Kelp, other feed-grade plant materials and naturally mined minerals. • Rich in micro-nutrients, amino-acids and organic compounds. • Improves overall soil health and turf establishment. • Will keep turf greener during drought conditions. • Gives turf a deeper green over traditional NPK fertilizers. 	
Unit Size:	<ul style="list-style-type: none"> • 20 Kg (44 lbs) 	
Application Rate:	<ul style="list-style-type: none"> • 10 - 20 lbs per 1000 sq.ft. (every 8-12 weeks) 	
Coverage:	<ul style="list-style-type: none"> • 2200 - 4400 sq.ft. per 20 Kg 	

Discussion: Alfalfa contains Triacentalol and Kelp (ascophylum nodosum) contains cytokinin, both of which are known bio-stimulants which aid in increasing plant root mass and plant vigor, resulting in better resistance to disease and insects. Since the Nutrients are not initially water insoluble and release slowly upon soil microbe breakdown, there is virtually zero risk of burning turf in hot dry conditions and as such, it can be useful in all lawn care programs as a Summer fertilizer as well as in Spring and Fall.

In addition to Turf, Alfalfa 5-1-5 with Kelp can be used in all plantings and is a common ingredient in soil blends used in nursery, container and vegetable growing. A Tea can also be made for liquid applications post planting. Annuals, perennials, trees, shrubs and vegetables will grow bigger and healthier.

In Summary, if you only had one product to supply nutrition to your turf, annuals, perennials, vegetables, trees and shrubs, the Alfalfa 5-1-5 with Kelp would be it and it does a fantastic job.
